New nucleic acid encoding motor proteins, useful in identifying compounds for the treatment of cellular proliferation disorders, such as cancer, autoimmune disease, inflammatory bowel disease, arthritis, keloids and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 psoriasis and tumours. The present sequence encodes a human MCAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of polynucleotide sequences encoding fragments of human motor protein, mitotic centromerassociated kinesin (MCAK). The MCAK enzyme fragments have microtubulestimulated Arpase activity. The invention also discloses methods for the use of the motor protein fragments. The methods and compositions are useful for high throughput screening systems for identifying compounds useful in the treatment of cellular proliferation disorders, such as cancer, autoimmune disease, arthritis, inflammatory bowel disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1421 BP; 417 A; 313 C; 387 G; 304 T; 0 U; 0 Other;
which alters the reading frame"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides novel mitotic centromere-associated kinesin (MCAK) polypeptides and their encoding polynucleotides. The invettion is useful for treating cellular proliferative diseases such as cancer, hyperplasia, restenosis, cardiac hypertrophy, immune disorders and inflammation. The invention also acts as a cytostatic and vasotropic agent. The present sequence is human mitotic centromere-associated kinesin (MCAK) DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          376 TIGCATTIGAIGAAACAGCTICGAAIGAAGTIGICTACAGGITICACAGCAAGGCCACTGG 435

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1172 TGGGCCTGGAAGTCTATGTGACATTCTTCGAGATCTACAATGGGAAGCTGTTTGACCTGC 1231
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AACCCAAGTTGAAAGTGGACTTAACAAAGTATCTGGAGAACCAAGCATTCTGCTTTGACT 931
                                                                                                                                                                                                                                              The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplassiss, restenosis, cardiac hypertrophy, immune disorders, inflammation, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease. The present sequence is a human MCAK fragment encoding DNA
                                                                                                                                            New human MCAK (mitotic centromere-associated kinesin) protein useful identifying agents for use in the treatment of cellular proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TGAAGGAGGAGAAGGTGGCGCTGATGAACCAGGATCCGGGCAATCCAAACTGGGAGACGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1051
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ñ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequences encoding fragments of human motor protein, mitoric centromere-
associated kinesin (MCAK). The MCAK enzyme fragments have microtubule-
stimulated ATPase activity. The invention also discloses methods for the
use of the motor protein fragments. The methods and compositions are
useful for high throughput screening systems for identifying compounds
useful in the treatment of cellular proliferation disorders, such as
cancer, autoimmune disease, arthritis, inflammatory bowel disease,
keloids, psoriasis and tumours. The present sequence encodes a human MCAK
New nucleic acid encoding motor proteins, useful in identifying compounds for the treatment of cellular proliferation disorders, such as cancer, autoimmune disease, inflammatory bowel disease, arthritis, keloids and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        931

Sequence 5990, Application No. US20050208558A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Venter, J. Craig
APPLICANT: et al.
TITLE OF INVENTION: DETECTION KIT, SUCH AS NUCLEIC ACID
TITLE OF INVENTION: ARRAYS, FOR DETECTING EXPRESSION OF 10,000 OR MORE
TITLE OF INVENTION: DROSOPHILA GENES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ATTCGTGCGTTGGGCAAACAGTCGGCCCACTTGCCCTTCCGTGTCTCCAAACTCACCCAG
